	%	
A. Report	10	Remark
<u>Project Planning Report</u>		
i. Problem Statements and Objectives	/ 1	
ii. List of functions and ADT Specification	/ 2	Draft
iii. Tasks distribution table and Gannt chart	/ 1	
<u>Final Report</u>		
i. Introduction / Conclusion	/ 1	
ii. ADT Specification	/ 1	Final
iii. Implementation Details - Justification for each data structure chosen, e.g., why do you consider the stack data structure, but not queue? - Justification for each algorithm chosen, e.g., why do you implement binary search, rather than other searching algorithms?	/ 4	
B. Program Source Code	20	
i. Basic functionalities, including add, edit, delete, search, sort, display - No compilation/run-time errors - File handling, usability, user friendliness	/ 12	
ii. Data Structures & algorithms - Any two data structures learned in TDS6213, including linked-list, stack, queue, hash tables, etc. - Array implementation is acceptable, but there will be no mark given in this section. - At least one sorting/searching algorithm learned in TDS6213	/ 3	
iii. Good Programming Practices - Code readability and cleanliness, consistent indentation - Commendation and documentation - Self-explanatory naming convention for variables and function names	/ 2	
iv. Extras - Self-defined header files, separate files for classes, exception handling, aesthetic design - Additional functionalities, etc.	/ 3	
C. Program Demonstration	10	
i. System demo video	/ 3	

ii. Presentation material and skills		/ 5	
iii. Question and Answer handling skills		/ 2	
Total		/ 40
